

Lab 1 – Requirements Engineering & UML Use-Case Modelling

Problem Statement #14 | Healthcare & Telemedicine Corporate Mental Wellness & Counseling Platform

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale
FR-001	Functional	The system shall generate an anonymized pseudo-ID for employee accounts to book counseling sessions without revealing corporate email or employee ID to the therapist.	High	Pass: Therapist dashboard and session metadata display only the pseudo-ID; Fail: corporate email or employee ID is visible to the therapist.	Protects employee identity and enables confidential counseling.
FR-002	Functional	The system shall allow a corporate employee to complete a stress assessment and view their resulting personal stress indicator.	High	Pass: After submitting all required assessment responses, the system calculates and displays a stress indicator; Fail: no indicator is generated or displayed.	Provides the core wellness assessment functionality.
FR-003	Functional	The system shall allow a corporate employee to book an available counseling session with a licensed therapist using a selected date and time.	High	Pass: A booking confirmation with therapist, date, time, and pseudo-ID is generated for an available slot; Fail: booking is confirmed for an unavailable slot.	Enables employees to access confidential counseling sessions.
FR-004	Functional	The system shall allow a licensed therapist to view their scheduled sessions using employee pseudo-IDs and update the session status after the appointment.	Medium	Pass: Therapist can view upcoming booked sessions with pseudo-IDs and mark a completed session as completed; Fail: employee corporate identity is displayed.	Supports therapist workflow while preserving employee anonymity.
FR-005	Functional	The system shall allow a corporate employee to record and view personal wellness indicators over time.	Medium	Pass: After a wellness indicator is saved, it appears in the employee's personal history with its date; Fail: the indicator cannot be retrieved by the employee.	Enables personal wellness tracking and progress monitoring.
NFR-001	Nonfunctional	The appointment scheduler shall handle timezone conversions accurately across global office locations.	High	Pass: For test bookings across supported office timezones, the employee and therapist views show the same appointment instant with the correct local times; Fail: any supported timezone produces an incorrect conversion.	Prevents missed or mistimed confidential appointments for global employees.
NFR-002	Nonfunctional	The system shall protect employee identity and wellness data so that only authorized users can access information required for their role.	High	Pass: Authorization tests show employees access only their own wellness data, therapists see pseudo-IDs for assigned sessions, and unauthorized requests are denied; Fail: restricted data is exposed.	Confidentiality is central to the platform and reduces privacy risk.

Requirement set check: Exactly 5 Functional Requirements (FR-001–FR-005) and 2 Nonfunctional Requirements (NFR-001–NFR-002), with measurable pass/fail acceptance criteria.
